Microsoft

Technology Careers Worldwide

Brief History of the Company

Founded in 1975 by Bill Gates and Paul Allen, Microsoft initially focused on computer software and revolutionized the market with the release of Windows in 1985. Today, the tech giant features a diverse portfolio that includes Office, Azure cloud services, the Xbox gaming division, LinkedIn, and major investments in artificial intelligence.

Our Sectors of Interest

The sector: Software Engineering

Microsoft's engineering organization is one of the largest in the world. It is divided into several groups, such as Cloud and AI, Experiences and Devices, and Gaming, among others. Software engineers at Microsoft design, build, test, and maintain the systems and applications used by billions of people every day, from Windows and Office to Azure and Xbox.

User Experience (UX) Design: Designing interfaces that prioritize accessibility, usability, and user satisfaction applied across products such as Windows, Office, and Xbox.

How the Selection Process Works

Microsoft's selection process for university and internship roles generally follows five main stages:

1. Online application:

Candidates apply through the official careers website (careers.microsoft.com), submitting a resume and, in some cases, answering a few short questions.

2. Resume screening:

Recruiters review applications to check whether the candidate's background matches the qualifications required for the role.

3. Online assessment:

Many technical roles include an online coding assessment, testing problem-solving skills, data structures, and algorithms.

4. Interviews:

Candidates who pass the assessment are invited to one or more interviews. These may include a recruiter screening call, technical interviews with live coding exercises, and behavioral interviews focused on Microsoft's core values, such as collaboration, respect, and a growth mindset.

5. Decision and offer:

After the interview loop, the hiring team makes a decision. Successful candidates receive an offer, which for interns usually happens months before the internship actually starts.

Testimonial from a Company Leader

Born in Jamaica and a former advertising professional in New York, Danielle Skeen built her career at Microsoft up to becoming a Sales Manager in Atlanta. For her, leadership means celebrating team wins and encouraging growth, alongside leading the Blacks at Microsoft community. Believing that representation transforms careers, she famously sums it up:
"Diversity is being invited to the party; inclusion is being asked to dance."

Danielle Skeen: Sales Manager, Microsoft Advertising Sales (Atlanta)

Letter of Intent & Letter of Recommendation

Dear Hiring Team,
I am writing to express my strong interest in the Software Engineer Intern position at Microsoft. As a student of Systems Analysis and Development, I have hands-on experience building user interfaces with TypeScript and React, along with a growing interest in UI/UX design, accessibility.

I am particularly drawn to Microsoft's mission to empower every person and organization to achieve more, and to its culture of growth mindset, where learning and collaboration are valued as much as technical skill. I believe an internship on your engineering team would let me apply what I've learned while growing under the guidance of experienced professionals.

I am a fast learner, comfortable working in collaborative environments, and committed to delivering quality work. I would welcome the opportunity to contribute to a real project team at Microsoft.
Thank you for considering my application. I look forward to the possibility of discussing this opportunity further.

Sincerely, Bianca Guimarães

To Whom It May Concern,
It is my pleasure to recommend Bianca Guimarães for the Software Engineer Intern position at Microsoft. I have had the opportunity to work with her during a group project in Systems Analysis and Development course and I have consistently been impressed by her dedication, curiosity, and technical growth.

Her has shown strong skills in front-end development, working confidently with TypeScript and React, and has demonstrated a genuine interest in creating accessible, user-friendly interfaces. Beyond technical ability, she brings a collaborative attitude to every team she joins, always willing to share knowledge and learn from others.

I am confident that she would be a valuable addition to any engineering team, bringing both technical competence and a growth-oriented mindset that aligns closely with Microsoft's culture.
I recommend her without reservation.

Sincerely, Reideclildon Paulo

Personal Testimonials

Gislany Araujo

I really enjoyed researching Microsoft's culture of growth mindset. It changed the way I think about mistakes: instead of being afraid of them, I started seeing them as part of learning.

Bianca Guimarães

Writing the letter of intent was one of the most useful parts of this project for me, because it is something I will probably need to do for real one day. It helped me practice how to talk about my own skills clearly and professionally, in English

Pedro Ayres

Despite the bad decisions taken by Microsoft during the last few years, its still an interesting topic to learn about.

Reid. Paulo

Researching Microsoft's history and culture made me realize how much technology companies value and invest in people who continue learning and striving to evolve, not just those who already know everything. This gave me more confidence in my own career path in this field.

João Marcos

Working on this seminar helped me understand what a real selection process at a big tech company looks like, step by step. It also showed me that soft skills, like communication and collaboration, matter just as much as technical knowledge.
